DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-5, 7-12, 14-20, 22-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Berner (4190972).

Berner discloses:

a drive housing disposed on the body;

a cavity disposed in the body, the cavity having a first side, a second side, and

An apparatus for moving particulate matter, comprising:

at least a partial semi-circular cross-sectional shape;

a paddle assembly having a shaft and a plurality of paddles disposed

therefrom, each paddle having a bottom wall and a distal end, wherein the distal end

travels along the semi-circular cross-sectional shape of the cavity during operation,

and the bottom wall is sized and shaped to extend along a width of the paddle in a

substantially planar manner between the first side wall and the second side wall of the cavity; and

a drive mechanism disposed in the drive housing, the drive mechanism

operatively connecting the motor and the shaft.

in col. 3, ln 52, it is taught that the body is constructed from a plastic material (in re cl. 7, 14, 22);

in re cl. 8, 15, 23, the "particulate matter" is recited in the intended format, therefore the grain use is met by Berner, since it is capable to be used for any particulate matter, including grain.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 6, 13, 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Berner (4190972).

Berner discloses the claimed invention of having a low RPM rotation except for teaching the specific range of 350-525.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to have an RPM range of 350-525, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).
